What can you do with masters in educational psychology

Educational psychologists study learning methods to understand how students of all ages absorb and retain information in a complex academic environment. Educational psychologists can work in implementing improved teaching methods, training teachers in these methods and also in student testing and data assessment. Educational psychologists require a master's degree in psychology with a concentration on educational psychology. While challenging, earning a master's in educational psychology prepares psychologists for some of the most rewarding education-related jobs in the industry. What Do Educational Psychologists Do? To understand what you can do with a master's in educational psychology, it's important to understand the variety of career options available. A large part of most careers in the field involves studying children in the classroom and working with both students and teachers on understanding the learning process. However, they also can work in any setting where people are learning. The goal is to better understand how people learn and develop strategies to improve the effectiveness of learning. These strategies can change depending on the setting and age of the students. Some educational psychologists will focus on specific populations in their work, such as adult students or elementary age children. Others work on students of all ages with certain conditions, such as hyperactivity. They also may branch out of the classroom setting and into areas such as social situations or even doing routine chores – times when people are still learning, according to the American Psychological Association. Jobs in Educational Psychology For specific jobs, the following looks primarily at jobs within the educational system. All are rooted in the goal of improving education and the effectiveness of teaching. Potential jobs for educational psychologists include: Developing new learning processes based on the study of the social, emotional and cognitive processes involved in learning Working as an instructor for teachers, educating them on how to implement a learning process specifically designed for their students Overseeing psychological tests and assessments that identify the effectiveness of learning methods – often used in schools or among populations where students are experiencing low academic numbers Working in instructional design, which involves the creation of new educational materials and tools to improve effectiveness Educational psychologists work the cutting edge of research into how people learn. They can work in government research projects, schools, and community organizations. Some corporations also hire educational psychologists to improve employee training programs. Educational psychologists' skills also are needed for technology-related issues. For example, some work to make sure that online courses are designed to maximize the effectiveness of the courses. They also look into communication issues and how learners understand and share information, including on social media. Educational psychology is a challenging field where the career possibilities are varied and interesting. For those who wish to have an influence on how people are educated, earning a master's in educational psychology can open doors to the kind of jobs they seek. Educational Psychology graduates have an understanding of learning and development and skills that enable them to support learners at all ages and stages. Educational Psychology (known as Education and Psychology at undergraduate level) students develop analytical, research and communication skills as well as knowledge of human learning and development. Those with a clinical educational psychology qualification have an advanced knowledge of assessment intervention, ethics and professional identity. Their specialist knowledge allows them to work in complex learning environments, including schools or for iwi and social services.Roles and career pathwaysEducation and Psychology graduates may work in a wide range of roles such as training and development advisers, educational resource developers, career consultants, human resource advisers, recruitment consultants (especially in education) and as policy analysts and researchers. In non profit organisations graduates could be learning advisers, youth support coordinators, community service managers or advocates. Graduates with undergraduate degrees or seeking a first role may work initially in administration or coordination, or junior adviser or analyst roles before progressing to more senior roles. In the community services sector, care assistant and recreation officer roles with any age and stage can also be a first step.Students can undertake a research-based Master of Educational Psychology programme and the practice-based Postgraduate Diploma that leads to registration as an educational psychologist. They need to complete the Master's before applying to study the limited-entry Diploma programme. The programme includes supervised practice as an intern psychologist and allows graduates to become a registered psychologist with the New Zealand Psychologists Board.Education and Psychology graduates with an undergraduate qualification may go on to complete a further teaching qualification at postgraduate level in early childhood or primary teaching. See Teaching.Where Education and Psychology graduates workEducation and Psychology graduates may work for government or non-governmental organisations (NGOs), community service providers, recruitment agencies, management consultancies or educational resource developers. Recent graduates have worked in organisations such as:Build relevant skills and experienceEducation-related internships, part-time work and volunteering all help to increase career options for graduates. Programmes such as Wellington Plus, Wellington International Leadership Programme (WILP) and the WFLSS Internship course run by the Wellington Faculty of Humanities and Social Sciences for students from all disciplines develop leadership skills, employability or practical work place experience. The Tupu Tai Public Sector Internship programme supports Pasifika students to explore policy career pathways within the public sector, and there are other government internship programmes available in a range of ministries.If you are looking at undertaking an undergraduate or postgraduate Teaching or Educational Psychology qualification, such programmes are looking for self-awareness, a passion for learning, appreciation of cultural difference, integrity, and aptitude for working with others. There are many ways these skills can be developed in the workplace. Working as a teacher aide, a childcare or school holiday programme assistant or in community work or youth work are good ways to gain experience working directly with people, particularly children, young people and their familiesMake career connectionsMaking connections with individuals and groups during your degree can help you learn more about career opportunities. The New Zealand Psychological Society (NZPS) offers free student membership to students studying psychology at a postgraduate level which includes access to a range of resources and events. Networking associations such as the Wellington Chamber of Commerce, Wellington Young Professionals and the Victoria Students' Psychology Association offer various events and opportunities for networking. The Alumni as Mentors programme for final-year students also helps enhance your connections and employability while studying. People who complete master's degrees in educational psychology can pursue a wide range of careers. The field of educational psychology focuses on studying how people learn, which can be applied to many different types of careers. Graduates can focus on jobs in education, research, or public policy. Typical settings where educational psychologists work include schools, health care facilities, business, and government offices. Typically, a master's in educational psychology will take around two years. A significant course that those who wish to earn a master's in psychology must take, according to gradschoolhub.com, is, not surprisingly, educational psychology. Specifically, this course teaches about "science-based theories of learning," and what effect these theories have on the day-to-day process of learning in the classroom. Some other courses include quantitative methods & instruments for assessment, lifespan development, and learning & behavior. These classes give graduates with a master's in educational psychology the skills they need to be successful in a career. Some of the most common jobs for graduates with master's degrees in educational psychology are discussed below. School Psychologist Both public and private schools employ school psychologists. In this role, graduates with degrees in educational psychology work closely with administrators to create an environment in which students can learn and thrive. Their work often involves applying research to create school-wide policies, procedures, and protocols. School psychologists can help teachers address issues with student behavior. They also work with individual students and parents to address emotional and psychological factors that may affect learning. According to bestpsychologydegrees.com, one trait that makes someone a good school psychologist is an approachable personality. Many times, children will be talking with the school psychologist about deeply personal issues, and most children will not immediately want to put their confidence in an adult that they don't know. Another good trait for school psychologists is the ability to handle children's' or adolescents' emotions without getting emotional themselves. Children may react in anger, sadness, or withdrawal, and the school psychologist must know how to deal with these emotions and begin to determine what the root of them is. A large part of the work of school psychologists is also training adults. They train parents and teachers to be aware of the problems that children face. According to the article, "4 Issues School Counselors Confront," school counselors must often deal with difficult issues, including bullying. Often, children do not know how to react to being bullied, yet, according to the article, 90 percent of children are bullied while in elementary school. At the same time, 60 percent say that they act as bullies themselves. The counselor must help the child being bullied, while often also needing to find out why the bully is behaving the way they are. Something else that school counselors must deal with is home issues. If a student's life at home is stressful, a school counselor may be the only one that can help them. In some cases, this involves dealing directly with parents. Other times, simply talking through the issues with the children themselves is enough. School counselors also deal with darker issues, such as substance abuse and suicide threats. This is why, in addition to an approachable personality and the ability to deal with emotions, school counselors need to have a good deal of courage and a commitment to helping others. College Counselor Many educational psychologists work in university settings, offering counseling services to students. Such counselors offer support to students who may be struggling with personal or academic difficulties. Some specialize in helping students who are having trouble with academics. The student may be on the verge of dropping out of the university or failing a class. One way that a college counselor can help at-risk students, according to edutopia.com, is by helping them revise their goals to be more realistic. If a student is pursuing goals that are unrealistic and they begin to realize their goals are unachievable, they may begin to see dropping out as the best option. Another way to help at-risk students is by encouraging them to be more engaged with others and to form more connections with other people. College counselors also deal with first-generation college students. First-generation college students may struggle with a feeling that they have changed their family structure, according to Linda Banks-Santilli, who was once a first-generation college student and is now a professor. She states that the students may feel that they have two different lives: one at home and one in college. They may also lack resources and the support of their family. For example, they may need to fill out financial aid forms on their own. Also, first-generation college students might feel that there is a negative association with being the first one in their family to go to college. They might feel that others look down on them because their parents did not go to college. College counselors help first-generation students as they figure out for themselves how college works. College counselors also assist returning students with their challenges. Often, it is difficult to return to the mindset of studying, says an article on emeraldgroupublishing.com. Once someone has stopped learning for years, they may have to "learn how to learn again." There is also the work-life balance. Mature students may find that they have far more responsibilities now than they would have had as an 18-year-old. They may have work, family, or other things that demand much of their time. On the other hand, mature students are often motivated in their studies. Counselors help to harness the motivation of returning mature students to help them reach their goals. College counselors may also work with students who are living with disabilities. According to bestcolleges.com, students with disabilities often feel they cannot tell anyone about their disability or people will think they are not intelligent. On the contrary, they are often highly intelligent people who need the content they are learning to be presented in different ways. College counselors can help them to deal with interpersonal issues, academic accommodations, and other areas they might struggle with. Educational psychologists may work as part of academic support services, within student health centers, or as part of specialized counseling centers. Educational Researcher After completing a master's degree in educational psychology, graduates can find employment as an educational researcher. They can do educational research in many different settings. Local, state, and federal government departments concerned with educational policy hire researchers. Non-profit foundations and NGOs focused on education often have educational researchers on staff and sponsor large-scale research projects. Companies involved in educational services, such as those offering course management software, online learning platforms, or for-profit education, may also employ researchers with master's degrees in educational psychology. According to topeducationdegrees.org, someone who wants to be an educational researcher must hold at least a master's degree. Relevant work experience is also helpful; an educational researcher should have the personal experience of teaching in a classroom. Educational researchers often work with a team of academic researchers, using their skills with design and measurement tools to come up with new solutions for learning. They work to eliminate issues in the system and ensure that it runs as smoothly as possible. They are responsible for supporting the professional development or further learning of teachers and administrators. University Teaching While teaching at a four-year university requires a doctoral degree, graduates with master's degrees can obtain positions teaching at two-year or community colleges. Also, graduates who have completed a master's degree may obtain paid research or teaching assistantships if they choose to continue on to their doctorates. In the article "What do Education Professors Do?" some of the everyday activities of college professors are listed. These include keeping students' academic records, grading students' exams and papers, conducting research in their field, and teaching in the classroom. Ideal characteristics for a college professor, according to this article by Russell L. Herman, include a willingness to invest in students' lives, resourcefulness for teaching, confidence, passion for the subject, enthusiasm, and the capability of challenging and motivating students. College professors must be prepared, informed, and organized. Also, they must be familiar with technology and how to use it. University and School Administration and Services A master's degree in educational psychology may also be a path to work in academic administration and student services. In many universities, educational psychologists may work in areas such as assessment. Assessment refers to the process of testing. It is a way of seeing how well students are grasping materials. Educational psychologists may work to improve assessments at the college level. Educational psychologists in university administration may also work with those who have disabilities. Instead of working directly with the student, as college counselors do, administrators may work to ensure that students with disabilities are given the accommodations they need. Residential life is another area that educational psychologists working as administrators for a university may work in. Residential life involves students who are living in the dorms. This is a job that might have quite a lot of paperwork, as students fill out forms and other paperwork. It might also mean being called to solve problems. An administrator dealing with residential life often works with RAs, or resident assistants. These are college students, who, for a discounted dorm price, help to run the dorm and ensure that any problems are taken care of. If problems arise that are greater than they can deal with, they may contact the administrator for help. Someone working in university administration might help run study skills centers and other support services for students. According to skillsyouneed.com, study skills include time management, organization, and prioritizing. Study skills centers help students who are struggling in these areas, because studying is an essential part of education, especially at the university level. While everyone has their own approach to studying, study skills centers can make all the difference to students who need help with their study process. A university or school administrator with a master's degree in educational psychology might help run these study skills centers. University administrators might also work with faculty to improve the quality of teaching. Since students usually come to college for an education, it is important that professors are giving students the education they are paying for. Educational psychologists in this setting must know how to assess whether or not a teacher is teaching well, and how the teaching could be improved. Another area in which educational psychologists may work is the area of online education. In 2020-21, many schools were thrown into online learning. Educational psychologists helped with this process. As many universities offer online classes regardless of current events, there is a need for educational psychologists. They may work at developing instructional strategies for online learning, which can include both synchronous classes and asynchronous classes. Synchronous classes take place at a set and specific time, usually over a video call, while asynchronous classes can be completed whenever the student has the time. In asynchronous classes, students must determine when to complete work; this demands a great deal of motivation. Educational psychologists may help determine which learning format is best for the classes in question. Also, they may offer support to remote students. Online learning is not always easy, and this means that students often need help. Final Thoughts on Becoming an Educational Psychologist A master's in educational psychology can lead to a wide range of careers in both the for-profit and non-profit sectors. One can work in healthcare settings helping struggling students, in government departments concerned with educational policy, or in schools or universities. Positions can focus either on research and educational design or on working directly with students. Do you prefer abstract concepts and working with numbers, or speaking directly to individual students? The answer to this question might help you to determine which of these careers you wish to pursue. ABA Staff, May 2021 Related: This concludes our article on what jobs are available for those with a master's in educational psychology.
